

JORDAN DEXTER

jdbdexter@gmail.com · 541-993-7235 · <https://dexterj.dev> · Portland, Oregon

SUMMARY

Software engineer with 2+ years experience owning features end-to-end, from design to deployment. Key strengths include React.js/Next.js development, automating workflows, and creating cohesive UI designs.

EXPERIENCE

PATTERSON LABS INC, Camas, WA

Software Engineer (Contract)

Mar 2025–Nov 2025

- Owned and shipped production features across 4 MERN products, ranging from a Websocket-based real-time chat interface to full-stack user registration flows
- Architected RESTful APIs (Python, FastAPI, SQLAlchemy) that handled JWT authorization flows and helped define clear, consistent request and response objects
- Led UI/UX standardization by establishing company-wide processes for defining typography, color guidelines, and Tailwind classes, ensuring all delivered products maintained a cohesive design
- Developed an AI-powered chat interface that integrated a client system with OpenAI APIs, allowing the model to recommend and execute platform-specific actions for users
- Ensured performant, SEO-optimized web applications by leveraging Next.js and server-side rendering (SSR)

YANOLJA CLOUD SOLUTION INC, Beaverton, OR

Front-end Developer

Mar 2024–Mar 2025

- Reduced site build time by 50% (from two weeks to one) through automated testing with Jest and automating data entry with Selenium, significantly shrinking the onboarding backlog
- Built a frontend JavaScript component library, integrating custom Wordpress themes with the Yanolja webservice, relied upon by 200+ hoteliers across the U.S
- Developed and maintained 200+ Wordpress instances for hoteliers, working directly with clients to design webpages that reflected their brand and business identity
- Recognized as the primary resource for UX and accessibility (WCAG 2.0) standards

MT. HOOD COMMUNITY COLLEGE, Portland, OR

Programming Tutor

Dec 2023–Mar 2024

- Provided personalized programming tutor support for undergraduates majoring in computer science and information technology (C++, Python, Typescript)
- Built Python/Selenium automations that removed an hour of daily manual reporting on hours tutored and subjects explored, saving 3-5 hours of admin work per tutor each week
- Assisted students in understanding computing concepts from programming, to networking, to algorithms at varying levels of complexity

TECHNICAL SKILLSET

- Languages:** Typescript, Python, Javascript, HTML/CSS, SQL
- Frameworks:** Next.js, React.js, Express, Vite, Tailwind
- Tooling & DevOps:** Node.js, MongoDB, Vercel, PostgreSQL, Git, Docker, Websockets, Figma
- Cloud & AI:** GCP, AWS
- Familiar:** Redux, Jest, Radix, jQuery, Github Actions

PROJECTS

FINE-TUNING OBJECT DETECTION MODELS

Undergraduate Research Project

- Retrained existing visual computing models using PyTorch to compare the fine-tuning capabilities of pre-trained models (various YOLOX versions). Compared and analyzed performance improvements in key benchmarks including F1, accuracy, and precision.

EDUCATION

PORTLAND STATE UNIVERSITY, Portland, OR

Completed Jul 2025

B.S. in Computer Science
